ELECTRIC

AUTOMATIC TRANSFER SWITCHES

LECTOTYP EMANUAL

AISIKAI ELECTRIC COMPANY PROFILE

WE FOCUS ATTENTION ON

Dual power automatic/manual transfer switching equipment -ATS
Integrated control and protection switches -CPS
Plastic case type circuit breakers- MCCB
Universal circuit breakers- ACB
Miniature circuit breakers- MCB
Surge Protectors- SPD
Load isolation switch -LIS
Automatic voltage protection delay switch-VPSR & D and manufacturing

Environmental

Construction

Solidarity

WE HAVE OBTAINED

A number of independent intellectual property patents
ISO9001: 2000 Quality System certification
CE certification
SGS certification
National compulsory CCC certification
Multi-voltage, full load test station

WE PURSUE

Innovative Design & Excellent Manufacture
Oriented by Customer satisfaction & expectation
Be vigilant in peace time, broaden sources of income and reduce expenditures
is our enterprise training code
Solidarity, Mutual Aid and Harmonious Development
is our team spirit
Sincerity, Excellence and Esteem
is our business philosophy
Quality, Service, Reputation and Innovation
is our development philosophy

WE MISSION

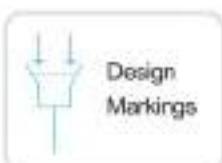

Making Contributions to the Society, For Benefits of the Employees

We are **AISIKAI**

CLASS PC AUTOMATIC SWITCH ATS SKT SERIES

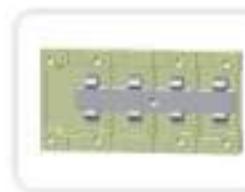

SKT SERIES (MOTOR-DRIVEN TYPE)

PRODUCT OVERVIEW

- SKT series dual power automatic transfer switch is currently the most advanced third generation product, is Class PC in grade and is an AC-33A frequently operable electrical transfer switch in application category, which having such four working modes as automatic, electric, emergency manual and locking, is suitable to be used in the 50/60Hz 20A-3200A low voltage AC power distribution systems for reliable transfer between two power supplies.

Applicable standards

- IEC60947-1/GB/T14048.1-2008 General Provisions for Low-Voltage Switchgears and Control Equipment.
- IEC60947-3/GB+14048.3 Low-Voltage Switchgears and Control Equipment Low-Voltage Switches, Isolators, Isolating Switches and Fuse-Combination Units.
- IEC60947-6-1/GB + 14048.11 Automatic Transfer Switching Electric Devices

DMC Main body

PERFORMANCE CHARACTERISTICS

RAW MATERIALS

- 99.99% high purity T2 copper material

The dynamic and the static contacts are manufactured with T2 copper material, their surfaces are plated technically with pure silver and their breaking capacity is much higher than that of the welding silver-point switches.

- DMC Main body

The main body of DMC is reinforced with unsaturated polyester glass fiber material, which is extremely high in the mechanical strength and the insulation performance and, compared with the ordinary ABS, is characteristic of such advantages as high strength, corrosion resistance and fire retardancy.

- Self-restoring drive motor

Selection of polychloroprene rubber insulation damp & heat type motor or permanent-magnet synchronous motor (patent technology), which is large in torque, low in noise, long in service life, is provided with overheating and over-current self-restoring protection and is better than that of the electromagnet in the comprehensive performance.

- Components & elements brand assurance

The electronic components & elements adopted are those of the well-known brands and the master control board is the product produced in the domestic front-line electronic OEM factory, which is treated with three-anti-process, thus making them reliable in use, high in performance and long in service life.

Application area

industrial purposes

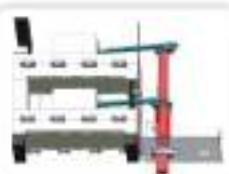

civil purposes

commercial purposes

Certification mark

CLASS PC AUTOMATIC SWITCH ATS SKT SERIES

Mechanical interlock

Structural design

- **Double-row composite contacts**

A double-row composite design is adopted for the dynamic contacts, the conductive area of which is twice as much as that of the single-sided contact switches.

- **Transverse-pull moving mechanism**

The dynamic contact makes reciprocating motion in the transverse direction, which has the advantages of zero arc and high safety factor as compared with the longitudinal separation type switches.

- **Double interlocking mechanically and electrically**

The precise mechanical design ensures complete separation between the two power supplies and the logical management of the master control circuit board achieves the electrical interlocking.

- **Safety zero position**

All the products of this series are equipped with a safety zero position, which is used to cut off both the two power supplies simultaneously, thus making them better than the two-section switches in the safety performance.

Double-row composite contacts

FUNCTIONAL ADVANTAGES

- **Prevention of early failure and damage to equipment**

In each piece of the dynamic contact, a high strength spring leaf made of the silicon manganese steel is fixed reliably in the base and the pressure between the dynamic and the static contacts is kept constant during the transfer process and after the closing of the switch, which can prevent effectively the equipment breakdown generated from the high voltage pulse caused by the contact bounce or fibrillation (common in the contactor switches). It is designed to be installed for use in such equipment as the diesel generators of frequent vibrations.

- **Load isolation function**

The precise safe distance can isolate effectively the power supply from the load and meet the creepage requirements, is provided with the obvious on-off position display and can be operated under a load.

- **Zero line overlapping switching**

This patented function is used to prevent the equipment from being damaged caused by the zero line potential drift, when the switch is switching (optional function).

Ultra-thin Design

PERFORMANCE ADVANTAGES

- **High breaking capacity**

8 times rated current breaking capacity, 10 times rated current making capacity, 12kV rated withstand impulse voltage, 120kA Rated limit short-circuit current.

- **High-grade use category**

AC-33A use category; Frequently operable, which has a wider scope of application than AC-33B that is not frequently operable in its scope of application in the use category.

- **Meeting Grade I and II power distribution requirements**

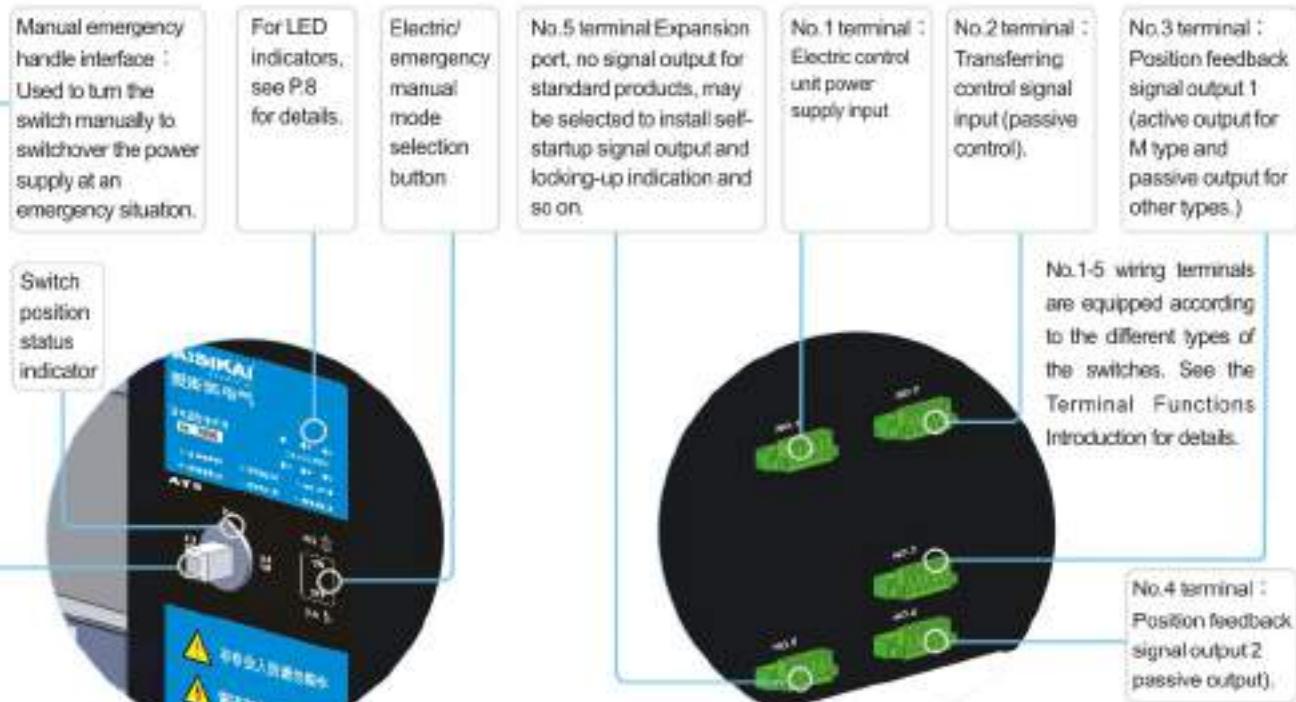

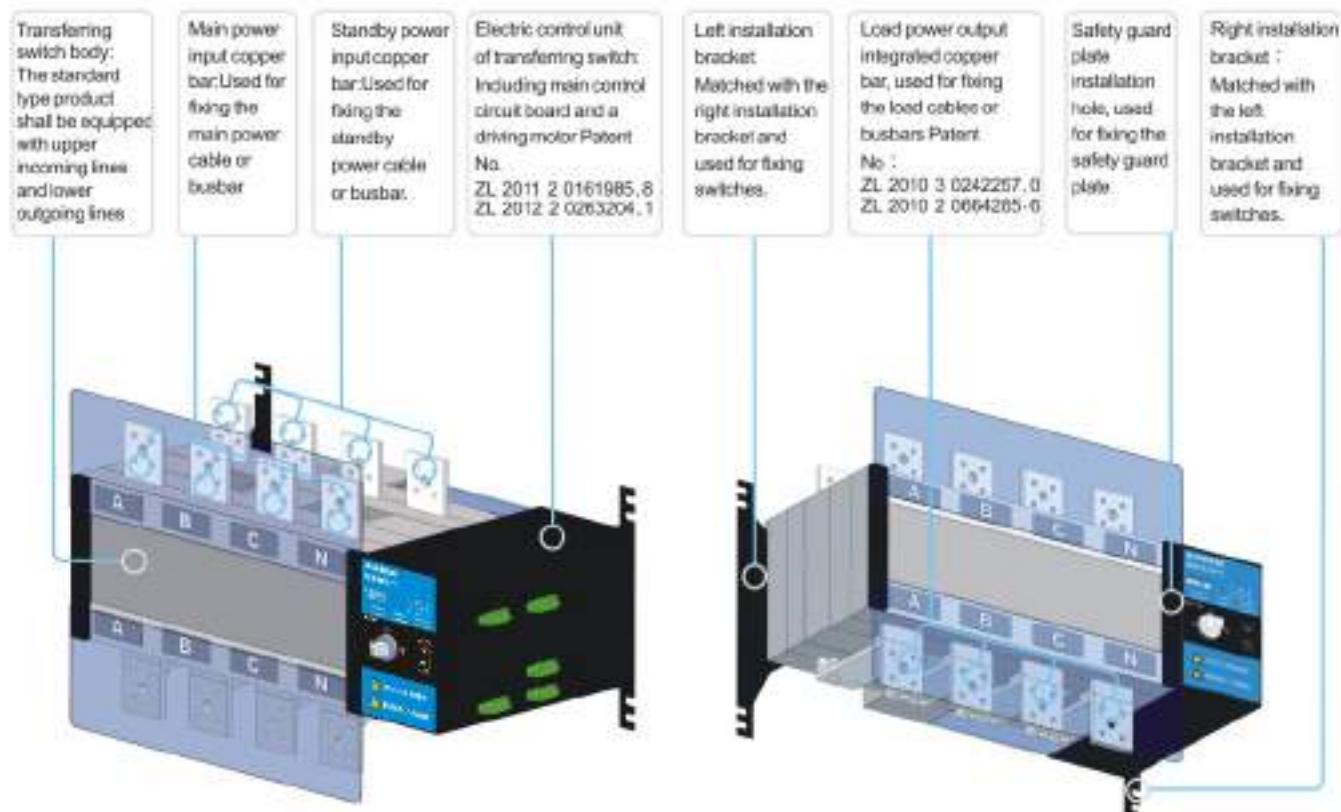

The good electrical properties can meet the technical requirements of the Grade I and II power distribution systems and have a higher impact resistance than that of the circuit breaker type ATS to avoid the master switch from tripping caused by the short-circuit of a single load.

- **Ultra-thin volume (20A-100A)**

The precise mechanical design achieves an ultra-thin volume and the volume of an electrical box assembled is only 25% of a floor tile (60 × 60) in size.

TYPICAL WIRING

First wiring schematic diagram

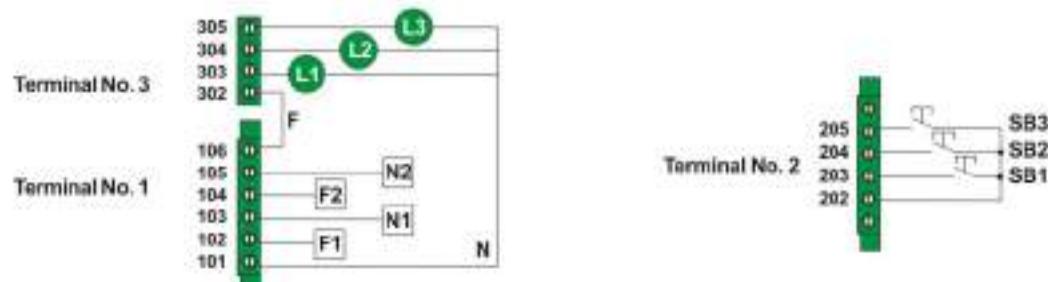

Note: The standard type product shall be equipped with upper incoming lines and lower outgoing lines and the product can be tailor-made with upper outgoing lines and lower incoming lines.

Secondary wiring schematic diagram : M type fully automatic transfer (electrical two-section type).

Note: M1/M2 type ATS is applicable to the end places without any requirement for the transfer delay.

Secondary wiring schematic diagram : X type remote control / external control electric transfer (passive control mode, electric three-section type).

Note: X type ATS is applicable to the end places that have technical requirement for the transfer delay and is generally used in conjunction with the generator unit.

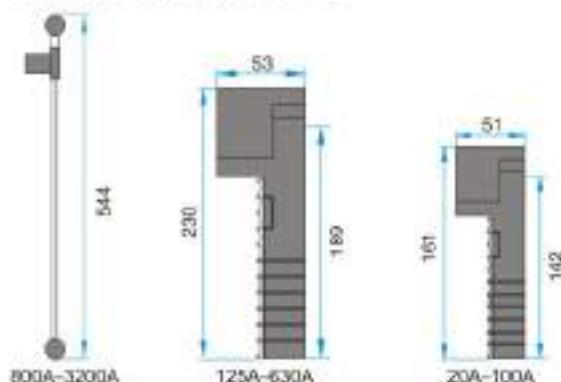

The passive control mode can achieve two/ three-section control and the active control mode can also be used to achieve the two-section control. For the secondary wiring schematic diagram, see M1/M2 type 125A-3200A circuit diagram for details.

F1 / N1 : Commonly used power live wire/neutral wire.
F2 / N2 : Standby power live wire/neutral wire.

L1 : Commonly used power powered-on indicator light, Line I is switched on.
L2 : Line 0 powered-on indicator light.
L3 : Standby power powered-on indicator light, Line II is switched on.
SB3 : Standby switching-on button (Line II is switched on).
SB2 : Double switching-off button (Line 0 is switched on).
SB1 : Commonly used switching-on button (Line I is switched on).

INSTRUCTIONS FOR USE OF LED INDICATORS

SKT SERIES

No.1	No.2	No.3	No.4	No.5	No.6
Line I control power supply is powered-on. (There is AC 220V between the access points 102 and 103 of No.1 terminal.)	Line I control power supply fuse is normal.	Line I control relay is normal (the relay is mounted on the internal circuit board and No.3 light is used for this function, only when No.4 light is not lit up).	Line II control power supply is powered-on (There is AC 220V between the access points 104 and 105).	Line II control power supply fuse is normal.	125A-250A switch, key lock or button is in the AUTO position (the key lock or the button is mounted on the front side of the switch). 400A-3200A switch and Line II control relay are normal (the relay is mounted on the internal circuit board).

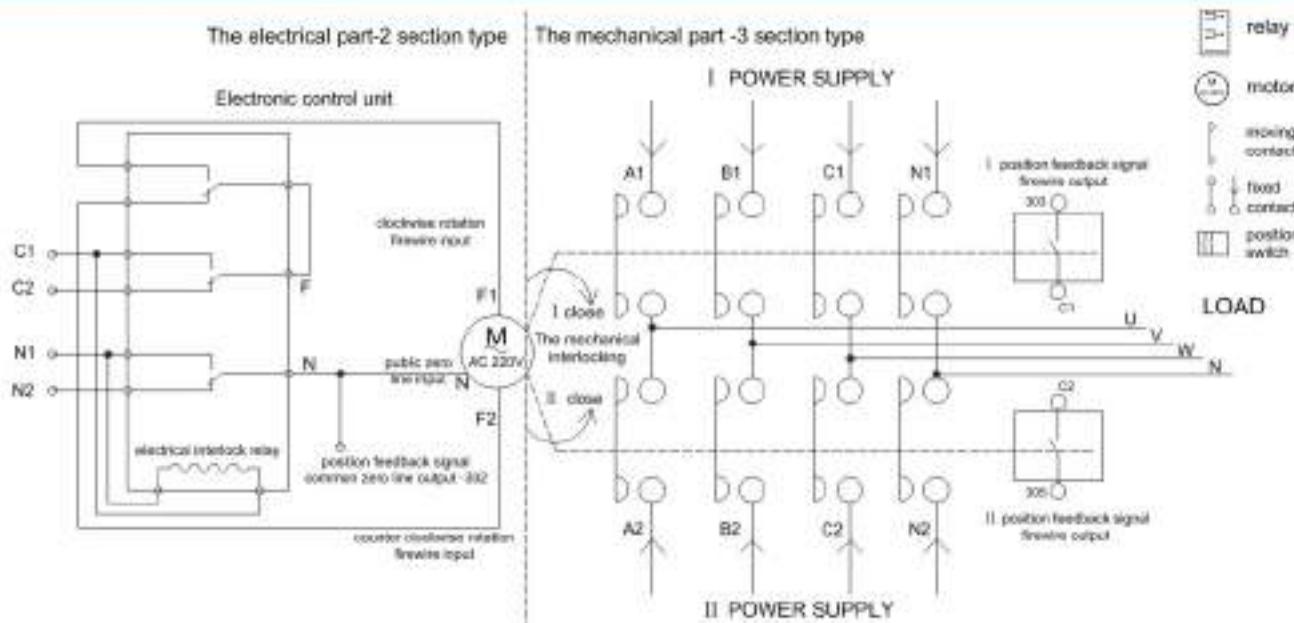

● Instructions for rapid application of LED indicators:

- A. No.1 and No.4 indicator lights are lit up, which stands for that the control power supply of the lines I and II are powered on.
 - B. No.2 and No.5 indicator lights are lit up, which stands for that the fuses of the control power supply of the lines I and II are normal.
 - C. No.3 indicator light is lit up, which stands for that the control relay of the line I is working normally.
 - D. No.6 indicator light for the 400A to 3200A switches is lit up, which stands for that the control relay of the line II is working normally.
 - E. No.6 indicator light for the 125A to 250A switches is lit up, which stands for that the key switch or the button is in the ON position.
- Note: M type switch 20A~100A has no LED indicator equipped.

CLASS PC MANUAL SWITCH ATS SKS SERIES

SKS SERIES (MANUALLY DRIVEN TYPE)

PRODUCT OVERVIEW

- SKS series dual power manual transfer switch, Class PC in grade, is a non-frequently operable electrical transfer switch, AC-33B in application category, which is suitable to be used in the 50/60Hz 20A-3200A low voltage AC power distribution systems for reliable manual transfer between two power supplies.

APPLICABLE STANDARDS

- IEC60947-1/GB/T • 14048.1-2008 General Provisions for Low-Voltage Switchgears and Control Equipment.
- IEC60947-3/GB • 14048.3 Low-Voltage Switchgears and Control Equipment Low-Voltage Switches, Isolators, Isolating Switches and Fuse-Combination Units.
- IEC60947-6-1/GB • 14048.11 Automatic Transfer Switching Electric Device

PERFORMANCE CHARACTERISTICS

- A composite dynamic contact is used, a spring energy-storage and instantaneous-release operating mechanism is adopted for instantly making and breaking and an obvious on-off position display is equipped, thus realizing reliable isolation between the power source and the load.
- The shell is made of unsaturated polyester fibers, which is high in the fire, pressure and high temperature resistance.
- High reliability: Accurate, flexible and smooth in switching transfer and long in service life up to more than 10,000 times.
- Beautiful in appearance, small in volume and light in weight.
- Operations inside or outside the cabinet will be provided as required.

Spring energy-storage mechanism

ENVIRONMENTAL REQUIREMENTS FOR USE

SKS SERIES	
Name	Requirements
Operating temperature	-20 To +45 °C, the average value for 24 hours shall not exceed +35 °C;
Operating humidity	The average humidity under the +40 °C conditions shall not exceed 50% without condensation;
Altitude	Lower than 2000 meters and, if higher than 2000 meters, reduce its rated value for use;
Vibration and gas	There shall be no strong vibration or shock and no harmful gases to corrode the metals and to damage the insulation within the environment of its use;
Surrounding material	There shall be no serious dust, conductive particles or explosive hazardous substances ;
Class of pollution	Class III ;
IP rating	IP20 ;
Storage requirements	To be stored under -30 To 70°C and in a dry, non-corrosive and saline environment and the longest period of storage shall be 1 year;
Packing	630 A and below packed in carton boxes; 800 A and above packed in wooden boxes.
Stack	630 A and below stacked no more than 5 layers; 800 A and above stacked no more than 3 layers

应用领域

Industrial purposes civil purposes commercial purposes

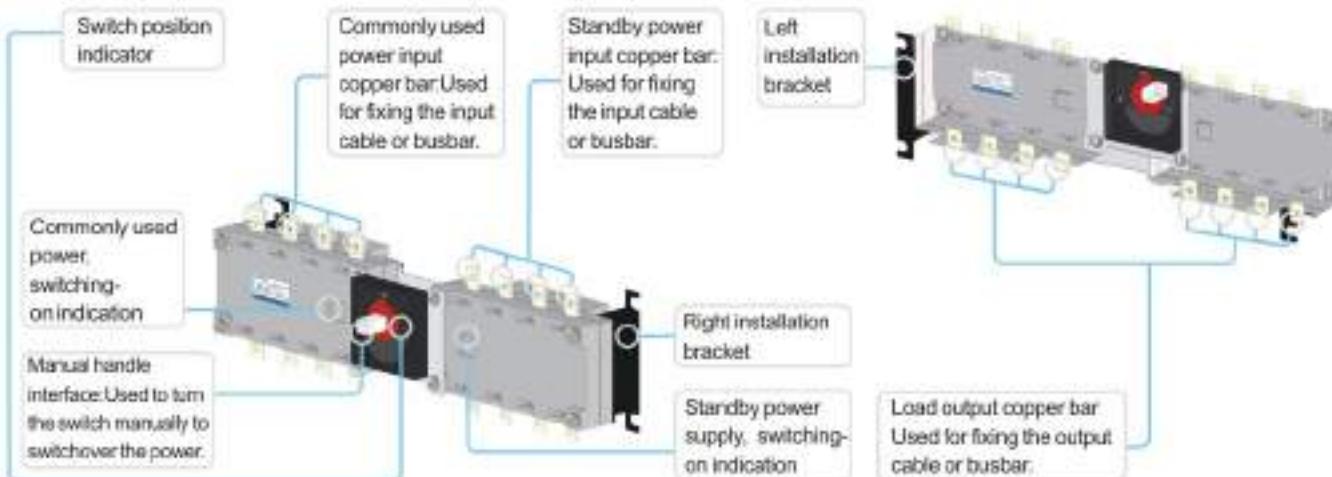

认证标志

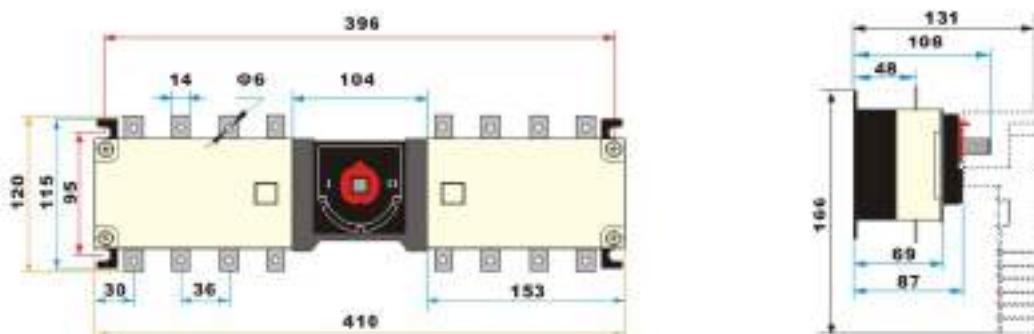

Main technical parameters : The manual ATS switch and the automatic ATS switch are identical in basic structure, see P3 for details .

CLASS PC MANUAL SWITCH ATS SKS SERIES

STRUCTURE INTRODUCTION (20A-100A)

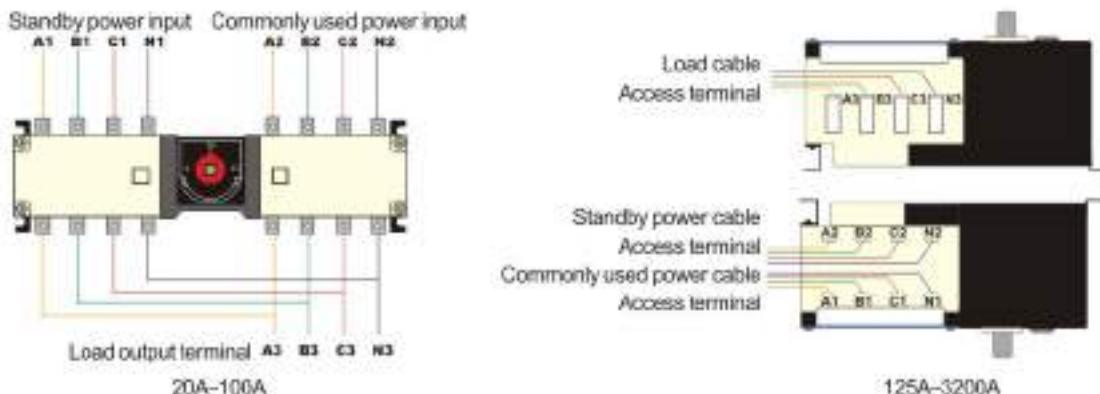

OUTLINE DIMENSIONS DIAGRAM (20A-100A)

Note: 125A-3200A manual switch ATS and SKT ATS Series 125A-3200A are fully identical in appearance, see P5 for details.

TYPICAL WIRING

First wiring schematic diagram

Note: When installing the 20A-100A switch, first connect the commonly used power and the standby power input terminals properly and, having verified that the phase sequence of both the power supplies are consistent, connect the load output terminal in parallel.

ASKQ SERIES (ELECTROMAGNETIC DRIVEN TYPE)

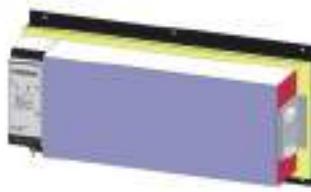

PRODUCT OVERVIEW

- ASKQ series dual power automatic transfer switch, Class PC in grade, is a non-frequently operable electrical transfer switch, which, having such 3 working modes as fully automatic, electric and emergency manual, is suitable to be used in the 50/60Hz 6A-6300A low voltage AC power distribution systems for reliable transfer between two power supplies.

APPLICABLE STANDARDS

- IEC60947-1/GB/T 14048.1-2008 General Provisions for Low-Voltage Switchgears and Control Equipment.
- IEC60947-3/GB + 14048.3 Low-Voltage Switchgears and Control Equipment Low-Voltage Switches, Isolators, Isolating Switches and Fuse-Combination Units.
- IEC60947-6-1/GB + 14048.11 Automatic Transfer Switching Electric Device

PERFORMANCE CHARACTERISTICS

- The electromagnet coil is protected with a temperature control device to prevent it from being burnt out.
- The excitation type electromagnet drive is adopted, which is extremely fast in transferring.
- The 6A-63A switch is suitable for home use, which meets the requirements of the pole power distribution system and the guideway installation is quick and easy in construction.
- 3200A-6300A switch is suitable for use in the industrial places for large-current switching and meets the Class I power distribution requirements.

ENVIRONMENTAL REQUIREMENTS FOR USE

ASKQ SERIES

Name	Requirements
Operating temperature	-5 To +45 °C, the average value for 24 hours shall not exceed +35 °C
Operating humidity	The relative air humidity of the installation location shall not be more than 50% at the maximum temperature of +40 °C; measures shall be taken, for example up to 90% at +25°C, when there is condensation on the products due to temperature changes.
Altitude	Lower than 2000 meters and, if higher than 2000 meters, reduce its rated value for use
Vibration and gas	There shall be no strong vibration or shock and no harmful gases to corrode the metals and to damage the insulation within the environment of its use
Surrounding material	There shall be no serious dust, conductive particles or explosive hazardous substances
Class of pollution	Class III
Installation category	Category III
Installation conditions	Installed vertically in the control cabinet and the power distribution cabinet

CLASS PC AUTOMATIC SWITCH ATS ASKQ SERIES

STRUCTURE INTRODUCTION (6A-63A)

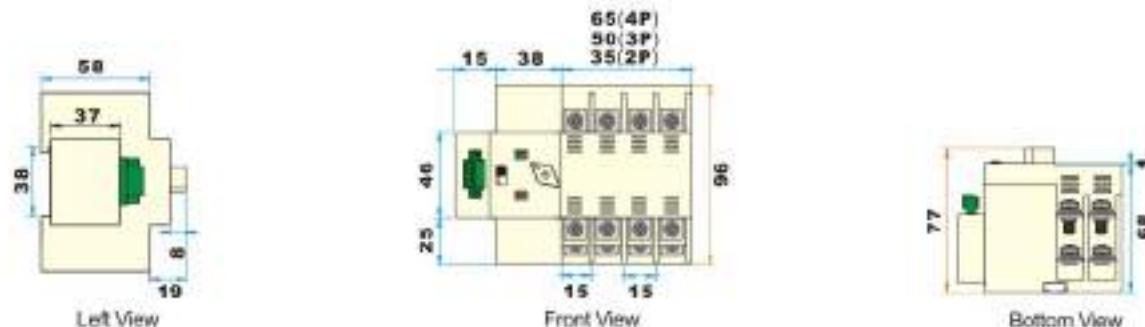

MAIN TECHNICAL PARAMETERS (6A-63A)

ASKQ SERIES

Copper bar rated operating voltage Ue	AC 400V
Copper bar rated operating current Ie	6A, 10A, 16A, 20A, 25A, 32A, 40A, 50A, 63A
Copper bar rated insulation voltage Ui	690V AC
Rated impulse withstand voltage Uimp	8kV
Use category	AC-33/A
Electrical class	CLASS PC
Frequency of use	50Hz-60Hz
Applicable standards	IEC60947-1 GB/T14048.11

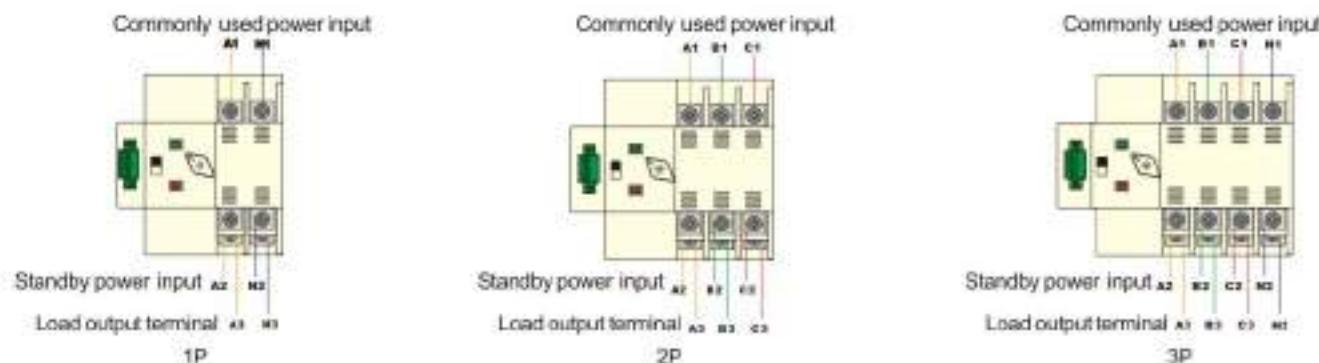

CLASS PC AUTOMATIC SWITCH ATS ASKQ SERIES

OUTLINE DIMENSIONS DIAGRAM (6A-63A)

TYPICAL WIRING DIAGRAM (6A-63A)

First wiring schematic diagram

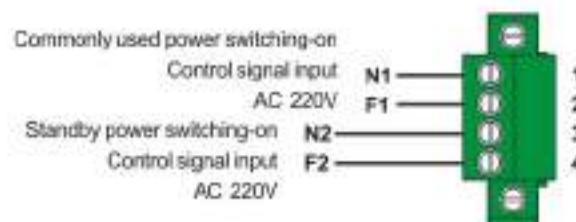

- Note: 1.Under the manual mode, first connect the commonly used power and the standby power cables properly and, having verified that the positions of the live wires and the zero lines of both the two power supplies are consistent, connect the load cable.
2.When it is required for the transfer switch to be operated manually, first put the button switch to the manual position and then turn the handle to switch over between the commonly used power and the standby power.

Secondary wiring schematic diagram

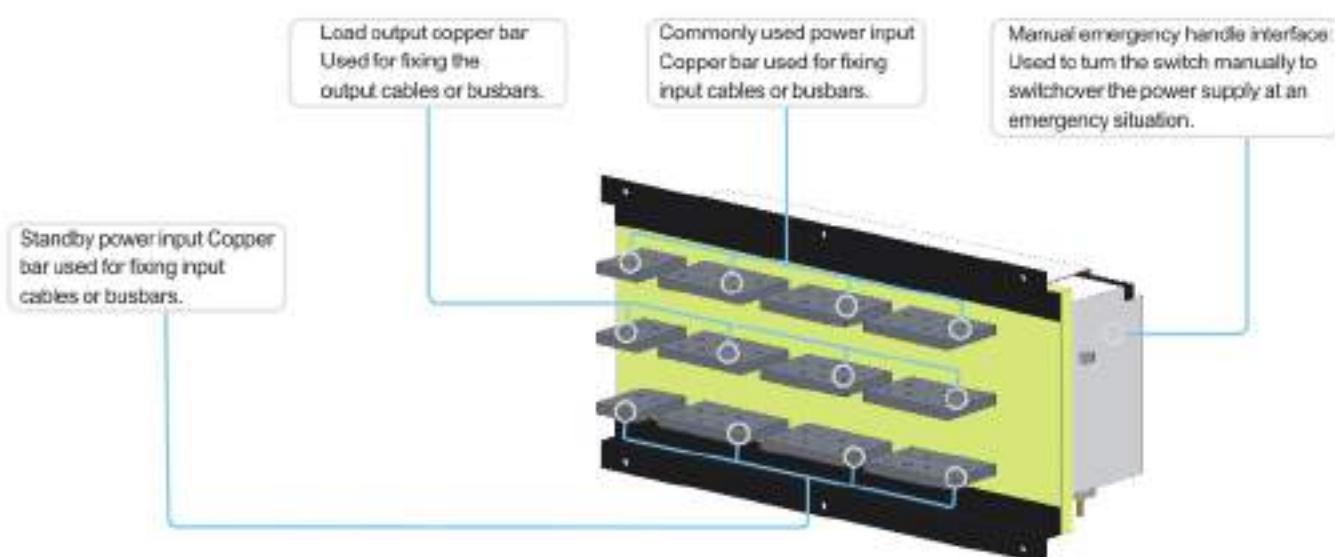

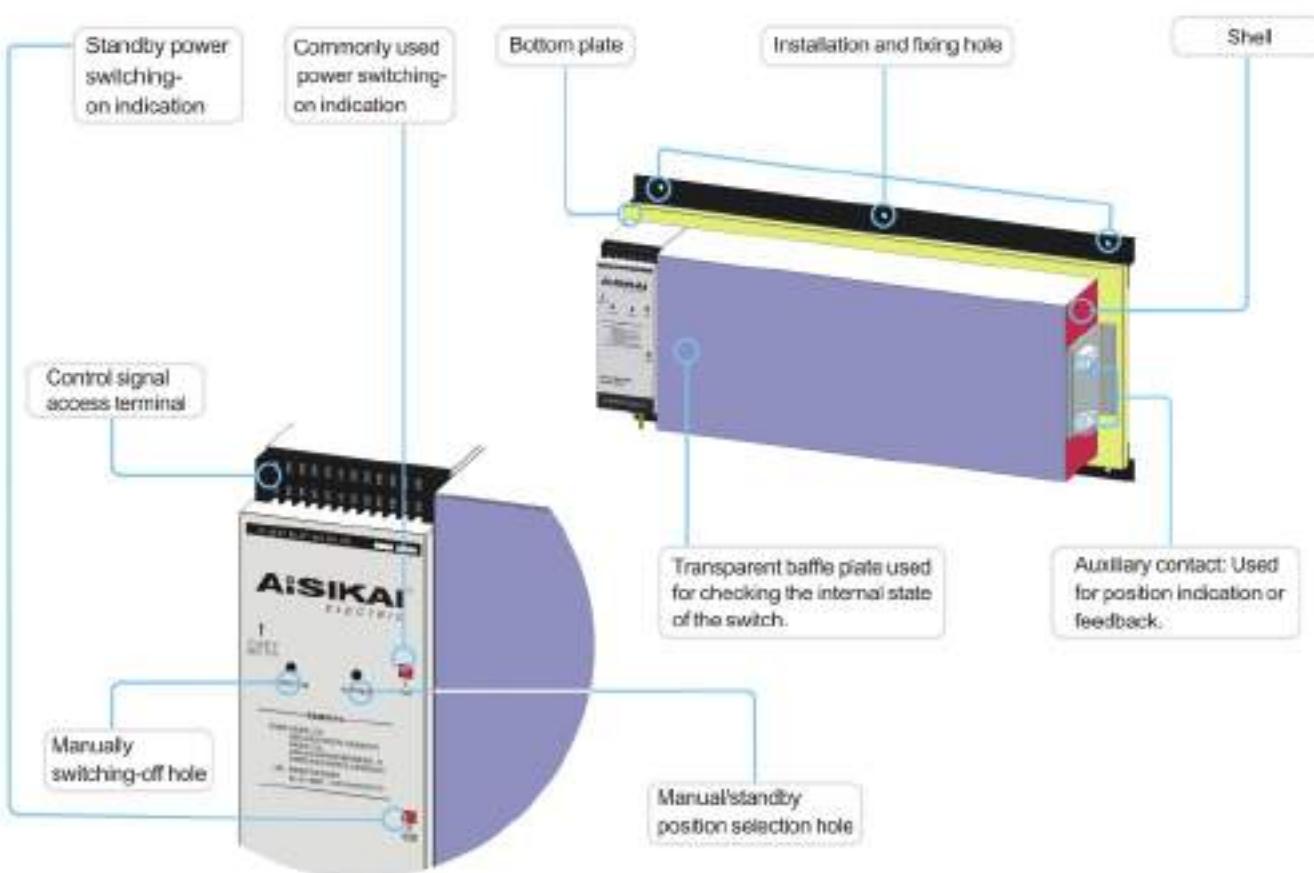

● Note:

- 1.The control signal input terminal of the 6A-63A type ATS switch was connected to the corresponding position of the copper bar before its delivery from the factory, so as to achieve such functions as automatically throw-into and automatic recovery and the commonly used power taking priority to supply the power. For the external control signals required, carry out the electric connections with reference to the following figure.
- 2.When connecting the power cables, make sure that the corresponding positions of the live wires and the zero lines of both the two power supplies should be consistent, or otherwise there may be damage caused to the control circuit of the switch.

CLASS PC AUTOMATIC SWITCH ATS ASKQ SERIES

STRUCTURE INTRODUCTION (3200A-6300A)

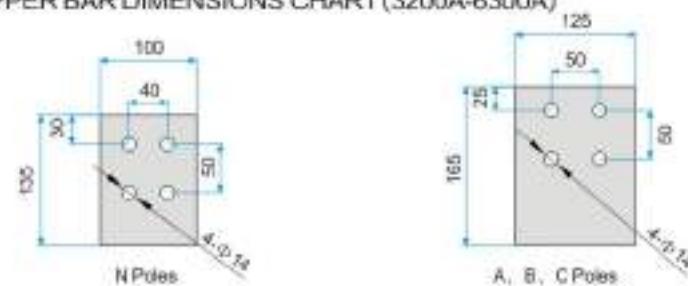

CLASS PC AUTOMATIC SWITCH ATS ASKQ SERIES

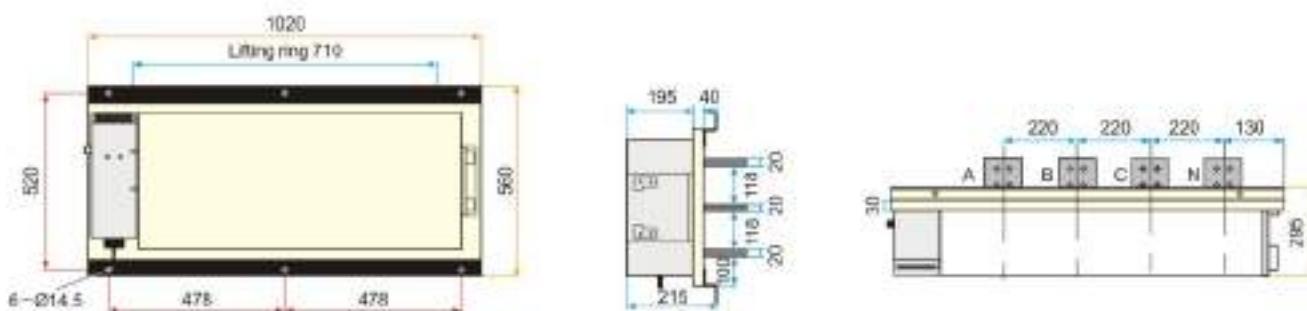

MAIN TECHNICAL PARAMETERS (3200A-6300A)

Conventional thermal current I_{th}	3200A, 4000A, 5000A, 6300A	
Rated insulation voltage of copper bar U_i	AC800V	
Rated impulse withstand voltage U_{imp}	8kV	
Copper bar rated operating voltage U_e	AC400V	
Copper bar rated operational current I_e	3200A, 4000A, 5000A, 6300A	
Mechanical structure	Three-section type	
Wiring mode	After panel (Before plate shall be the product supplied specially)	
Number of poles	3P	4P
Weight (kg)	121	130
Operating current (A)	DC110V/125V AC100V/110V AC200V/220V/230V	36 36 18
Tripping current (A)	DC110V/125V AC100V/110V AC220V	6 6 2
Short time withstand current	50kA	
	Rated limit short-circuit current (use for protection) 120KA	
	Making and breaking capacity AC-33B (10le making/10le breaking) cos=0.35 DC-33B(4le making/4le breaking) L/R=2.5ms	
Performance	Time-shifting A source-B source B source-A source	<0.2s
	Service life : 6000 times, Mechanical service life: 10000 times.	
	Operating cycle frequency 120 times/hour	
Auxiliary switch	A and B power supply sides are 2 normally open and 2 normally closed; switching capacity : AC: 110V5A/AC: 220V3A, DC: 220V0.2A.	
Accessory	Operating handle	

INPUT AND OUTPUT COPPER BAR DIMENSIONS CHART (3200A-6300A)

OUTLINE DIMENSIONS DIAGRAM (3200A-6300A)

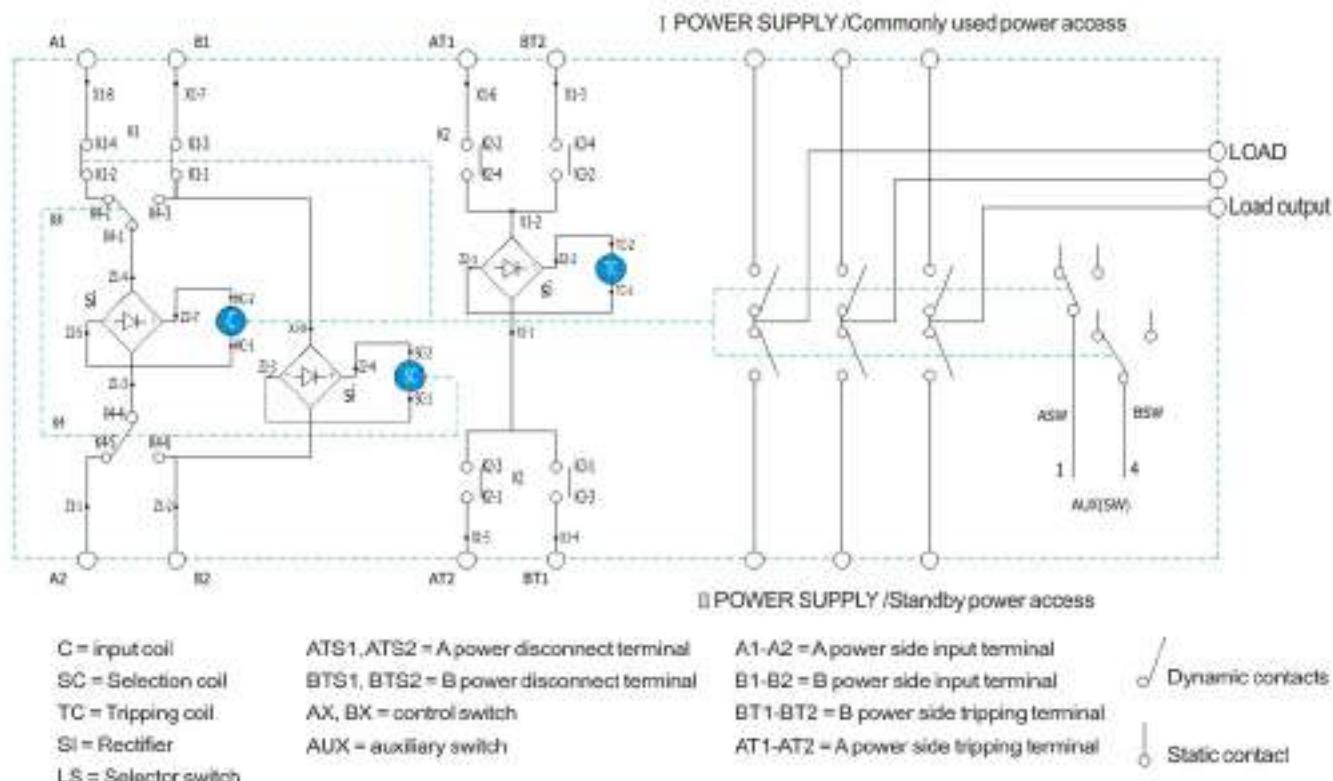

- Note: ATS is equipped with four lifting rings. Before lifting, it is necessary to check the lifting rings to find out whether they are tightened up onto the mounting guideway of the switch, to check the carrying capacity of the ropes to find out whether it should not be less than 500kg and to carry out a trial lifting to determine the position of the center of gravity of the ATS, so as to prevent any rollover and slipping accident occurring due to the incorrect center of gravity.

CLASS CB AUTOMATIC SWITCH ATS SKQ1 SERIES

SKQ1 SERIES (MOTOR-DRIVEN TYPE)

PRODUCT OVERVIEW

- SKQ1 series dual power automatic transfer switch is currently the most advanced third generation product, is Class PC in grade and is an AC-33A frequently operable electrical transfer switch in application category, which having such four working modes as automatic, electric, emergency manual and locking, is suitable to be used in the 50/60Hz 20A-3200A low voltage AC power distribution systems for reliable transfer between two power supplies.

APPLICABLE STANDARDS

- IEC60947-1/GB/T 14048.1-2006 General Provisions for Low-Voltage Switchgears and Control Equipment.
- IEC60947-3/GB + 14048.3 Low-Voltage Switchgears and Control Equipment Low-Voltage Switches, Isolators, Isolating Switches and Fuse-Combination Units.
- IEC60947-6-1/GB + 14048.11 Automatic Transfer Switching Electric Device

PERFORMANCE CHARACTERISTICS

D type MCB

- Reasonable in structure, smallest in volume, beautiful in appearance, provided with a protective cover, more safe and reliable in supply of power.
- Complete in protection functions, provided with short circuit and overload protection.
- Noise-free operation, energy saving and consumption reducing, convenient in installation, easy in operation, reliable and stable in performance.
- D type miniature circuit breaker is adopted internally.

SKQ1 SERIES

	LF	HF	A
4P	200	120	220
3P	164	120	184
2P	128	120	148

MAIN TECHNICAL PARAMETERS

SKQ1 SERIES

Rated short-circuit breaking capacity	3KA
Rated short-circuit making capacity	3KA
Transferring time	< 3s
Control voltage of transfer switch	AC220V
Mechanical service life of transfer switch	The mechanical service life of transferring between the commonly used power and the standby power shall be 3000 times and the electric service life shall be 1500 times.
Copper bar rated insulation voltage UI	U=500V
Copper bar rated operating voltage Ue	AC380V (2P switch is AC220V)
Copper bar rated operating current Ie	10A, 16A, 20A, 25A, 32A, 40A, 63A

Making and breaking capacity

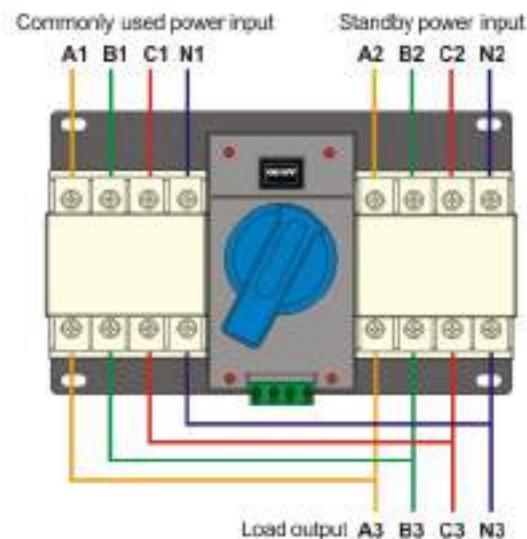

Use category	Making and breaking test conditions				
	L/Ie	U/Ue	cPhi4	Power-on time S	Cycle period min
AC-33B	8,0	1,05	0,5	0,05	< 5

Note: The motor load under the non-frequent operation of AC-33B may include the hybrid load of the motor and the resistance load.

Note:

1. According to the actual needs of the power distribution lines, connect the input terminals of the commonly used power and the standby power properly and, having verified that the phase sequences of the two power supplies should be consistent connect the load terminals in parallel.
2. When it is required for the transfer switch to be operated manually, first put the button switch to the manual position and then turn the handle to switch over between the commonly used power and the standby power.
